About Verdiem

Verdiem is a leader in IT energy management and efficiency software. Verdiem helps organizations reduce operational costs and increase efficiency for end user computing and print devices. Verdiem delivered the first integrated platform for both print analytics and energy optimization for distributed IT devices including PCs, Macs, printers, and IP phones. More than 700 corporations, government agencies and educational institutions have deployed Verdiem on over 2.5 million devices. Most customers experience payback within 6 to 12 months.

Proven Savings

Verdiem's customers have realized energy savings in excess of $250m. For example, personal computers are the #1 IT energy consumer with the potential to save $20-$60 per device per year. Savings quickly add up to hundreds of thousands if not millions annually. Further savings opportunities now exist with our new print and power analytics solution which provides actionable data that can lead to $20-$60 per user per year savings.

Quick ROI

The strong savings results typically deliver payback in 6 to 12 months. With utility rebates, your return can be realized in as little as three months. This makes a compelling case to invest in an IT energy management solution.

Low TCO

Our platform is simple and rapid to deploy. Once up and running, our solutions take only a few hours a month to maintain and manage. And, you won?t spend unnecessary time resolving issues with us. We typically get fewer than two support calls per customer in a year. When we do, we?re open 24x7 to get you a quick resolution.

Non-Disruptive

Maybe best of all, your end users won?t even know! Your support lines won?t light up when you turn on our solution. Our solution is transparent to your end users.
